🕒 Created time	@February 25, 2026 2:53 PM

INITIAL SETUP (**Do only once**)

1. open an empty project folder
2. clone repository

```
git clone https://github.com/sadat2103108/Dining-Token-Digitalization.git .
```

1. Starting Work on a Task

✓ Always begin like this

```
git checkout develop
git pull origin develop
git checkout-b feature/<task-name>
```

Example:

```
git checkout-b feature/token-api
```

✓ Ensures your branch starts from latest code

✗ Never branch from old code

2. While Coding

✓ Save work frequently

```
git add .  
git commit-m"feat: implement token purchase logic"
```

✓ Small commits are good

✗ Don't wait hours to commit

3. If develop updated while you worked

✓ Update your branch before pushing

```
git checkout develop  
git pull origin develop  
git checkout feature/<task-name>  
git merge develop
```

If conflicts appear:

- Fix files manually
- Then:

```
git add .  
git commit-m"merge develop into branch"
```

✓ Prevents future PR conflicts

4. Push Your Branch

```
git push origin feature/<task-name>
```

Then open Pull Request → target `deveLop`

5. Before Opening PR — CHECKLIST

- App runs locally
- No debug prints/logs
- Code formatted
- No commented junk code
- DB changes included (if needed)
- Tested your feature manually
- Merged latest develop

Only then open PR.

6. After PR Approved & Merged

Clean up locally

```
git checkout develop  
git pull  
git branch-d feature/<task-name>
```

- ✓ Keeps repo clean
- ✓ Prevents confusion

7. Fixing a Bug

```
git checkout develop
git pull
git checkout-b fix/<bug-name>
```

Example:

```
git checkout-b fix/qr-expiry
```

8. Emergency Hotfix (build broken)

```
git checkout develop
git pull
git checkout-b hotfix/<issue>
```

Fix → PR → merge fast.

9. Most Used Commands Summary

Task	Command
Pull latest code	<code>git pull origin develop</code>
Create branch	<code>git checkout -b feature/name</code>
Save work	<code>git add .</code>
Commit	<code>git commit -m "message"</code>
Push branch	<code>git push origin branch</code>
Merge develop into branch	<code>git merge develop</code>
Delete branch	<code>git branch -d name</code>

10. Team Golden Rules

✓ One task = one branch

- ✓ Always branch from develop
 - ✓ Always merge develop before PR
 - ✓ Never push directly to develop
 - ✓ Never force push
-
